

India Crime Analysis (2001–2012)

An interactive data visualization dashboard built on District-wise IPC Crime records (2001–2012)

Team: Vivek Mohite & Shlok Damudre | Lokmanya Tilak College of Engineering — AIML

INTRODUCTION

Crime patterns in India vary widely across states, union territories and districts, and shift considerably over time. Understanding these variations is essential for law enforcement planning, resource allocation and public policy. This project develops an interactive dashboard that turns official crime records into intuitive visual insights for analysis and decision-making.

PROBLEM STATEMENT

Crime data is recorded across states, districts and years in large spreadsheets and statistical reports that are difficult for students, researchers, law-enforcement personnel and the public to interpret. An interactive platform is needed to transform raw crime records into meaningful visuals that enable quick comparison across regions and time periods.

OBJECTIVES

- Build an interactive dashboard using district-wise IPC crime data from 2001 to 2012.
- Visualize crime distribution across states, union territories and districts.
- Compare crime categories and identify which types are most prevalent.
- Highlight the districts and neighborhoods most affected by crime.
- Help users track year-over-year crime trends via interactive filters.

DATASET DESCRIPTION

Source dataset: “District-wise Crimes committed under the Indian Penal Code (IPC), 2001–2012,” covering State/UT, District, Year, Crime Head/Type and Total IPC Crimes recorded — giving a comprehensive view of India's crime landscape over more than a decade.

PROPOSED DASHBOARD FEATURES

- **India Map** — State-wise crime intensity shown geographically, colour-coded by total crime volume.
- **Year Range Slider** — Filter crime data across any custom range between 2001 and 2012.
- **Crime by Type** — Pie chart showing the proportional split of crimes across categories.
- **Worst Neighborhood Table** — Ranked, searchable list of districts by total crimes recorded.
- **Crimes by Year Trend** — Line chart tracking the percentage change in crimes year-over-year.
- **Total Crimes District-wise** — Drill-down table listing crime totals for every state and district.
- **State/UT Filter** — Dropdown to isolate and compare data for a specific state or union territory.

EXPECTED OUTCOMES

- Simplifies interpretation of complex crime statistics for a general audience.
- Enables meaningful comparisons of crime trends across states and districts.
- Supports law-enforcement planning, academic research and policy-making.
- Demonstrates practical application of BI and data visualization techniques.

CONCLUSION

The India Crime Analysis (2001–2012) dashboard will transform official crime statistics into an interactive decision-support tool — enabling users to explore crime trends and regional disparities efficiently while promoting evidence-based analysis for academic, administrative and law-enforcement purposes.
